

Scenario

You are working as a junior web developer for a small company that creates websites for businesses and organisations.

'MobileWorldStation' is a local mobile phone shop and they have asked you to create a website based on the following requirements.

- The main focus of the website is to promote and sell mobile phones, accessories and services.
- The website should target anyone who is interested in buying mobile phones.
- The website should load easily and be quick and easy to navigate (consider using menus).
- The website should contain at least eight linked pages.
- The website should contain at least one table.
- There should be a consistent use of text, colour schemes and page styles in all of the web pages.
- The website should be interesting and have at least four suitable, different original and/or ready-made, embedded multimedia/digital assets, e.g. digital animation, digital graphics, digital audio, digital video.
- The website should contain some interactive features, e.g. a feedback form to collect customer enquiries.
- The website should have at least two external hyperlinks to other interesting webpages.
- Each web page should be internally linked, with easy-to-navigate menus.

Challenge yourself to use HTML language to create the above website. However, if you have difficulty using HTML language, instead use website builder sites such as; **wix.com** to create your website. Please try to complete this task (which is related to your website unit) before September.
